DRINKING WATER POINT

JOIN THE PIPE DRINKING WATER POINT

Tap water: the sustainable and healthy thirst-quencher. Nobody has to go thirsty with a drinking water point nearby. Easy to use, no running around trying to find a tap and most importantly: less plastic waste!

Our tap water stations have been designed in collaboration with Dutch water companies. Made from AISI-316 stainless steel, they are vandal and tamper-proof meeting the latest hygiene requirements. The drinking water point can be fitted to an existing water pipe, it filters the water and has its own drainage system. Our standard drinking points are white but can be supplied in company, club or university colours. Over 1.000 water filling stations have been fitted at schools, in parks, sports clubs and universities throughout the Netherlands and are now introducing Join the Pipe abroad.

Every drinking water point we fit helps us support one of our clean water projects in Africa.

STANDARD WATER POINT

HAPPER-TAPPER

(includes a fountain)

INDOOR

(includes a drip tray)

BAR TAP

The Join the Pipe drinking water point can be placed both in- and outside. They are easy to install in a restaurant bar or combined with a kiosk or vending machine.

The drinking water point for behind the bar has the possibility to dispense chilled still and sparkling filtered tap water. They meet the highest quality requirements.

According to the quality of your local water supply the most sustainable water treatment technology is chosen to provide healthy, great tasting drinking water.

OUR SUSTAINABLE WATER BOTTLES

Our new bottles are affordable, with tops available in 8 different colours. It is possible to mix colours per bottle and to personalise the bottle with your company logo or name. The range now includes a new 3D design.

- ✓ Refillable
- ✓ BPA-free plastic
- ✓ Dishwasher proof
- ✓ 0.5 litre & 1 litre versions
- ✓ Transparent, frosted or solid body
- ✓ 8 standard RAL colours

CITY CLEAN-UP

By drinking tap water from reusable bottles we can reduce the amount of plastic waste both here and in developing countries. With the proceeds from our bottles we organise City Clean-Ups with local schools and city councils, helping cities in developing countries who suffer terribly from waste plastic mountains.

CLEAN TAP WATER FOR AFRICA

For every drinking water point set up in Europe we contribute to a clean drinking water project in Africa. We fit high quality hand pumps and sustainable water filters for easy access to clean water. Reusable bottles are given to school children to store and drink water hygienically.

This year we have started placing our prize winning Join the Pipe Water Kiosks at schools in Africa. School children will learn how to manage money and water while attending school. This also gives schools the opportunity to finance the water bill and other necessities.

<https://www.youtube.com/watch?v=wFJSDM7nOVw>

Join the Pipe has initiated more than 250 projects in many African countries including Kenya, Tanzania, Gambia, Congo, Burkina Faso, Benin and Mozambique.

If your company or school already have links with a project in a developing country that you would like the BOGO bottles sent to please let us know.

Join the Pipe is the first community of tap water drinkers from all over the world sharing the same dream of redistributing drinking water in a fairer way. Join us too!

ENQUIRIES & HOW TO ORDER

We offer complete packages including water points and bottles.
